Manual

**Model 2071WM for Vaisala WMT50
and WXT510 weather transmitters**

Panelmeter 2071WM for Vaisala weather stations

General Description

Panel meter 2071WM and field display 2800-2071WM are designed for displaying the output signals of Vaisala Weather Transmitters WMT50 and WXT510. Weather parameters can be selected by using arrow keys on front panel. Nine channels can be used for available weather parameters, but without alarms and outputs..

Analog output:

0-20mA, 4-20 mA or 0-10V output is available for one input channel as an option. Output is freely scalable and can be set to any of the weather parameters.

Alarms:

Two alarm relays are available as an option.

Order codes

2071WM-REL2-24VDC **Power 24 V (12..32 VDC)**
 2071WM-REL2-230VAC **Power 85..240VAC**
 (Type code includes display with two alarm relays)

Options:

REL2 2 alarm relay
 OUT 1 Output 0-20mA/4-20 mA/0-10V

Technical specifications

Input:	RS-485
Max distances:	1000 m
Communication protocol:	- ASCII - no CRC - automatic or polled
Data	8 bits, 1 stop, no parity
Address:	0
Baud rate:	300, 600, 1200, 2400, 4800, 9600 and 19200 bauds
Output	0-20mA, 4-20 mA or 0-10V (1 channel) Max. output load 600 ohm
Alarms	2 alarm relays Max. 260 VAC, 2 A
General specification:	
Display	1 + 4-num. bright red LED, digit height 14.5 mm
Power	85..240 VAC or 12..32 VDC/ 24VAC
Front panel protection	IP65 with gasket
Case dimensions	48 x 96 x 115 mm (DIN1/8)
Ambient temp	-10..+60 °C
Weight	200 g

Front panel

Channel number is not shown when only one channel is configured.

Arrow-buttons(▲▼) are used to change numerical values and when moving in menu-structure.

Star-key (★) accepts selected function (enter).

Configuration stage

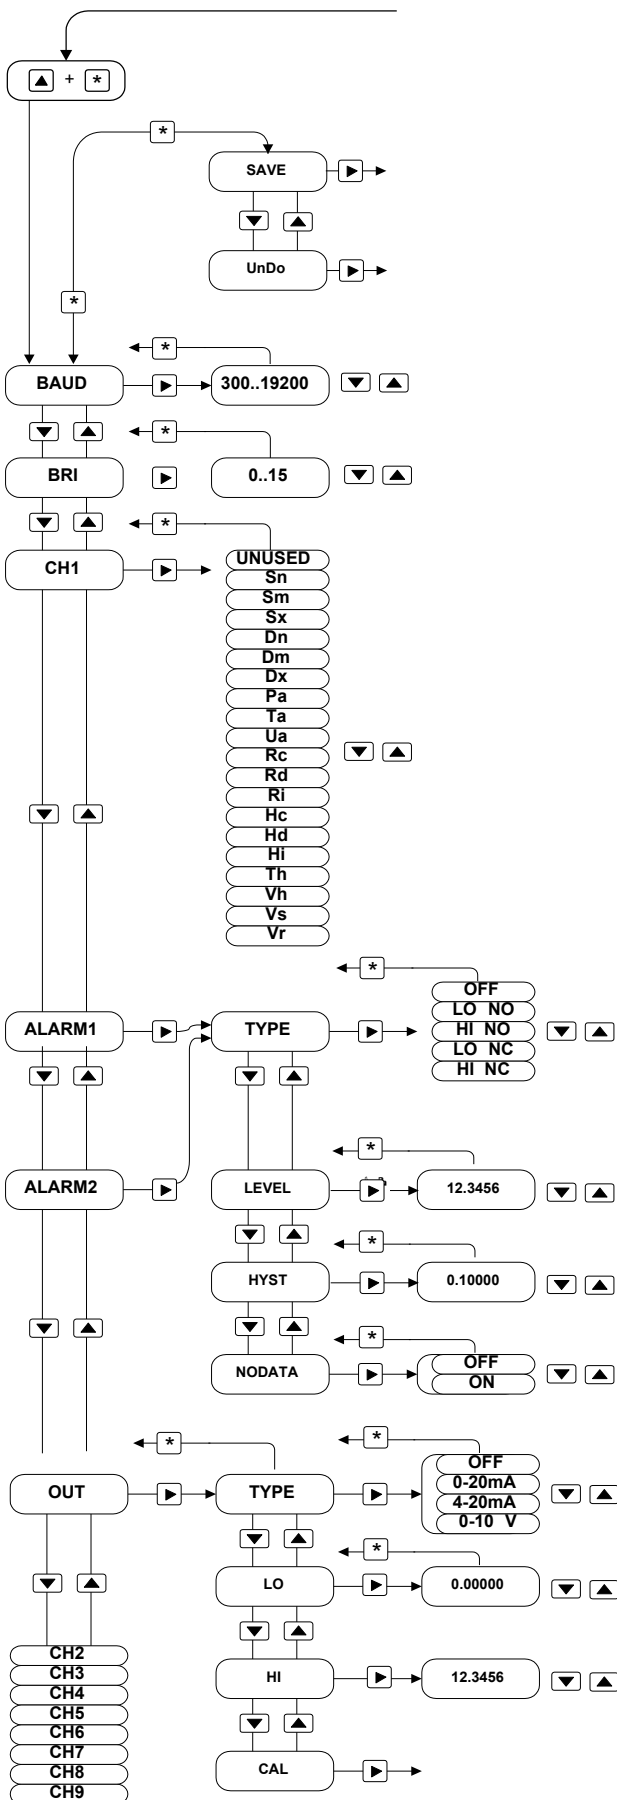

Configuration can be started by pressing and holding ★- and ▲-keys simultaneously for 2 seconds. Specified instructions on pages 5 Configuration.

Resetting configuration parameters

Some times it is necessary to return indicator parameters to factory defaults. Resetting can be done by pressing and holding ▼- and ►-keys simultaneously for 2 seconds when connecting supply voltage. Prosedure will reset all settings to factory defaults.

Configuration

Beginning:

Configuration can be started by pressing and holding **★**- and **▲**-keys simultaneously for 2 seconds. Arrow keys **▲▼** moves up and down in main menu. Desired function is selected with **▶**-key. Save mode can be selected directly by pushing **★**-key in main menu.

Save Accept changes and exit from configuration mode

Undo changes and exit from configuration mode

Baud: Baud rate selection: 300, 600, 1200, 2400, 4800, 9600, 19200

Bri: Display brightness 0..15, brightest 15.

CH1:

Weather parameter selection:

- Sn Wind speed minimum
- Sm Wind speed average
- Sx Wind speed maximum
- Dn Wind direction minimum
- Dm Wind direction average
- Dx Wind direction maximum
- Pa Air pressure
- Ta Air temperature
- Ua Relative humidity
- Rc Rain accumulation
- Rd Rain duration
- Ri Rain intensity
- Hc Hail accumulation
- Hd Hail duration
- Hi Hail intensity
- Th Heating temperature
- Vh Heating voltage
- Vs Supply voltage
- Vr 3.5 V ref. voltage

Alarm 1 & 2: (from CH1)

Type: Off = Alarm off
 Lo No = Low limit alarm, normal open relay
 Hi No = Hi limit alarm, normal open relay
 Lo Nc = Low limit alarm, normal close relay
 Hi Nc = Hi limit alarm, normal close relay

Level: Alarm level

Hyst: Alarm hysteresis.

Nodata: Alarm CH1 if data is not available

Out: Analog output settings (CH1).

Type: Output type selection.

Lo: Low end of scaling (4mA/=0V).

Hi: High end of scaling (20 mA/10V)

Cal: Calibration menu (factory settings).

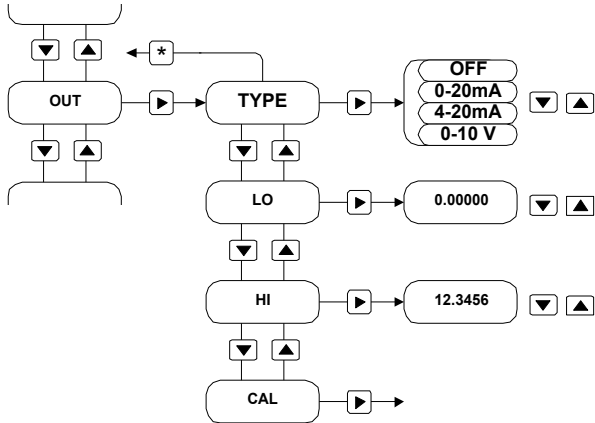

CH2..CH9: Display channels without alarms and outputs

Output 0/4..20 mA (option)

Meter may be provided with isolated output, ranges 0/4..20 mA or 0..10 V, which are programmable. You can mount output card to slot B or C (default B). Calibration information is saved to card and no calibration is needed in configuration. You need not

select card in programming because meter recognizes the mounted card. Programming: select slot B in main menu. Press **▶** key. Display shows 4-20. See below description.

Main menu

Select 0-20 mA, 4-20 mA or 0-10 V. Output function can be disabled without removing the output card.

Select low end of output scaling

Select high end of output scaling

Output connections

Terminal block with pins 1-6. Pin 6 is labeled '+', pin 5 is labeled '-'. Pins 4, 3, 2, 1 are grouped together and labeled '0-10V'.

Card slot B

Terminal block with pins 1-6. Pin 6 is labeled '-', pin 4 is labeled '+'. Pins 5, 3, 2, 1 are grouped together and labeled '0-20 mA' and '4-20 mA'.

Card slot B

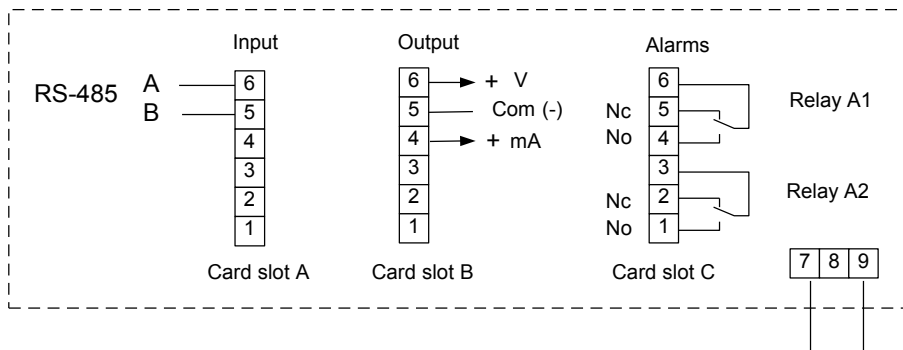

(option)

Passive 2-wire output 4-20 mA

Terminal block with pins 1-6. Pin 4 is labeled '4-20 mA', pin 2 is labeled '+24 V'. Pins 6, 5, 3, 1 are grouped together with a dashed circle around pin 3.

Card slot B

Terminal Connections

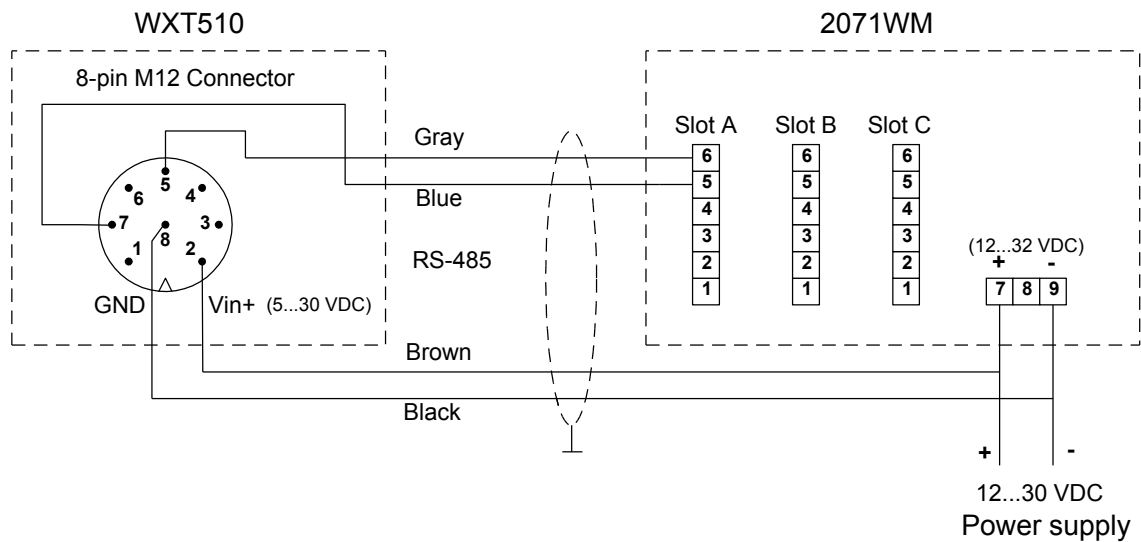

Card slots B and C are for optional cards.

Only one of the serial connectors can be used at a time.

Power supply (no polarity)
12..32 VDC, 24VAC,
(green connector)

Option:
85..240 VAC (grey connector)

Connections to Vaisala WXT510 and WMT50

Vaisala weather transmitters can be set two modes, automatic ASCII or polled ASCII mode.
If Poll ASCII mode is selected the display 2071WM fetches measuring data by using next commands:

- aR1 (Wind) about 5 s
- aR2 (Air temperature, humidity and pressure) about 60 s.
- aR3 (Rain) n. 13s.
- aR5 (Heating voltage, supply voltage) about 16s.

Panelmeter 2000 construction

The 2000 series panelmeters are modular and easy to assemble. According to customers wishes. The basic construction consists of mother board with three slots, A, B and C. Slot A determines meter type and provides always input signal. Slot B and C are interchangeable. As factory delivery input signal is always installed into slot A, mA output into slot B and alarms into slot C. In case of f.ex 4 alarms and relay card with 2 change-over contact (2 + 2 relays) are used, you must place second relay card into slot B. If

you accept only closing or opening relay contacts, you need only one relay card with 4 relays placed into slot C. The slot B is now usable for other optional outputs.

You can have different types of meters by only changing the input card in slot A. Data sheet of each type of meter dictates the possible combinations. Recalibration of card is not needed; only scaling and other settings must be set by front panel keys.

Change of meter type:

Input card is placed always to slot A. By changing input card you can get another type of meter. You can change meter with pulse input to meter with current input, thermocouple, strain gage etc.

Additional slots:

Additional cards provide output 4..20 mA, alarms, serial interface, BCD output etc. Meter data sheet dictates possible combinations. grey connectors allow line voltage 110..240 VAC (relay contacts).

Power supply:

There are two different mother boards power supply 85..240VAC and 12..32 VDC. mother board accepts 24 VAC. Connectors are colour coded.

Removing meter from case:

Loose connectors. Loose front panel and draw meter out from front. You may remove mother board from rear by opening four screws in corners of case

Press gently case behind front panel and draw frame outwards gripping upper part of frame.

Modular indicator serie 2000

5 digit (2011) or 6-digit
bright red LED display

**Option cards
(slots B and C):**

Alarms cards:

2 relay card, 4 alarm types,
change over contacts
3 relay card, closing contacts
4 I/O-ports

Model 2011:

2 relays change over contacts
(also with remote reset)

Output cards (not for 2011):

0/4..20 mA, 0..10 V
RS232 or RS485

Power supply:

85..240VAC or
12..32 VDC / 24 VAC

Sensor supply:

24VDC,
150 mA

Process inputs (model 2011):

0..20 mA, 4..20 mA

0..1V/5/10 V

Potentiometer 100Ω-10kΩ

Input card contains:

- microprocessor
- bus control
- keys control
- display control

Indicator 2011 can have limited part of 2000 series functions. Model 2021 contains also process inputs but it can also measure RTD-sensors and thermocouples. 2021 has more accurate and faster A/D-converter (16 bit 1/64 000).

2000 series input and option cards:

2011-IN	Process input	2000-BASE	Base card with power supply
2021-MU	Multi input	2000-REL2	Alarm card, NO/NC
2031-IR	Infrared sensor input	2000-REL3	Alarm card, Closing contacts
2041-SG	Strain gage measurement	2000-OUT	Output card, U and I
2051-PU	Scaleable frequency indicator	2000-RS	Serial output RS232 or RS485
2061-CO	Counter input (max 5 kHz)	2000-I/O	4 pcs input /output ports (60 V / 100 mA)
2071-RS	Serial input RS232 / RS485		
2081-BCD	BCD-input (1-5 digits)
